GPL-37 Chain Reaction Organic Fertilizer Story

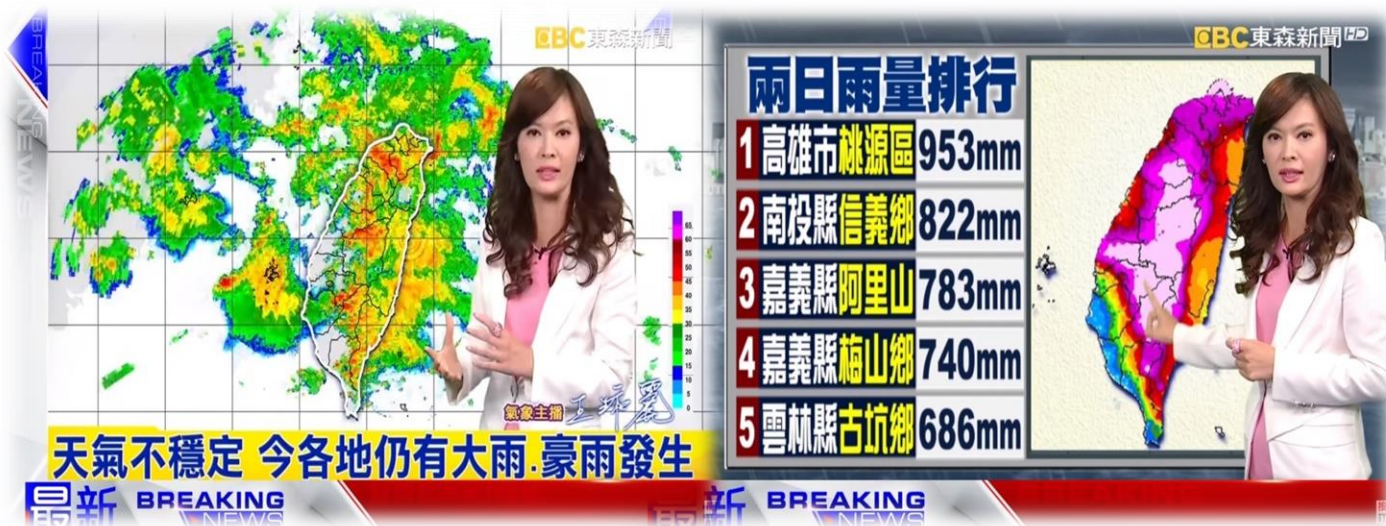

The vineyard soaked in the rain water for 20 days

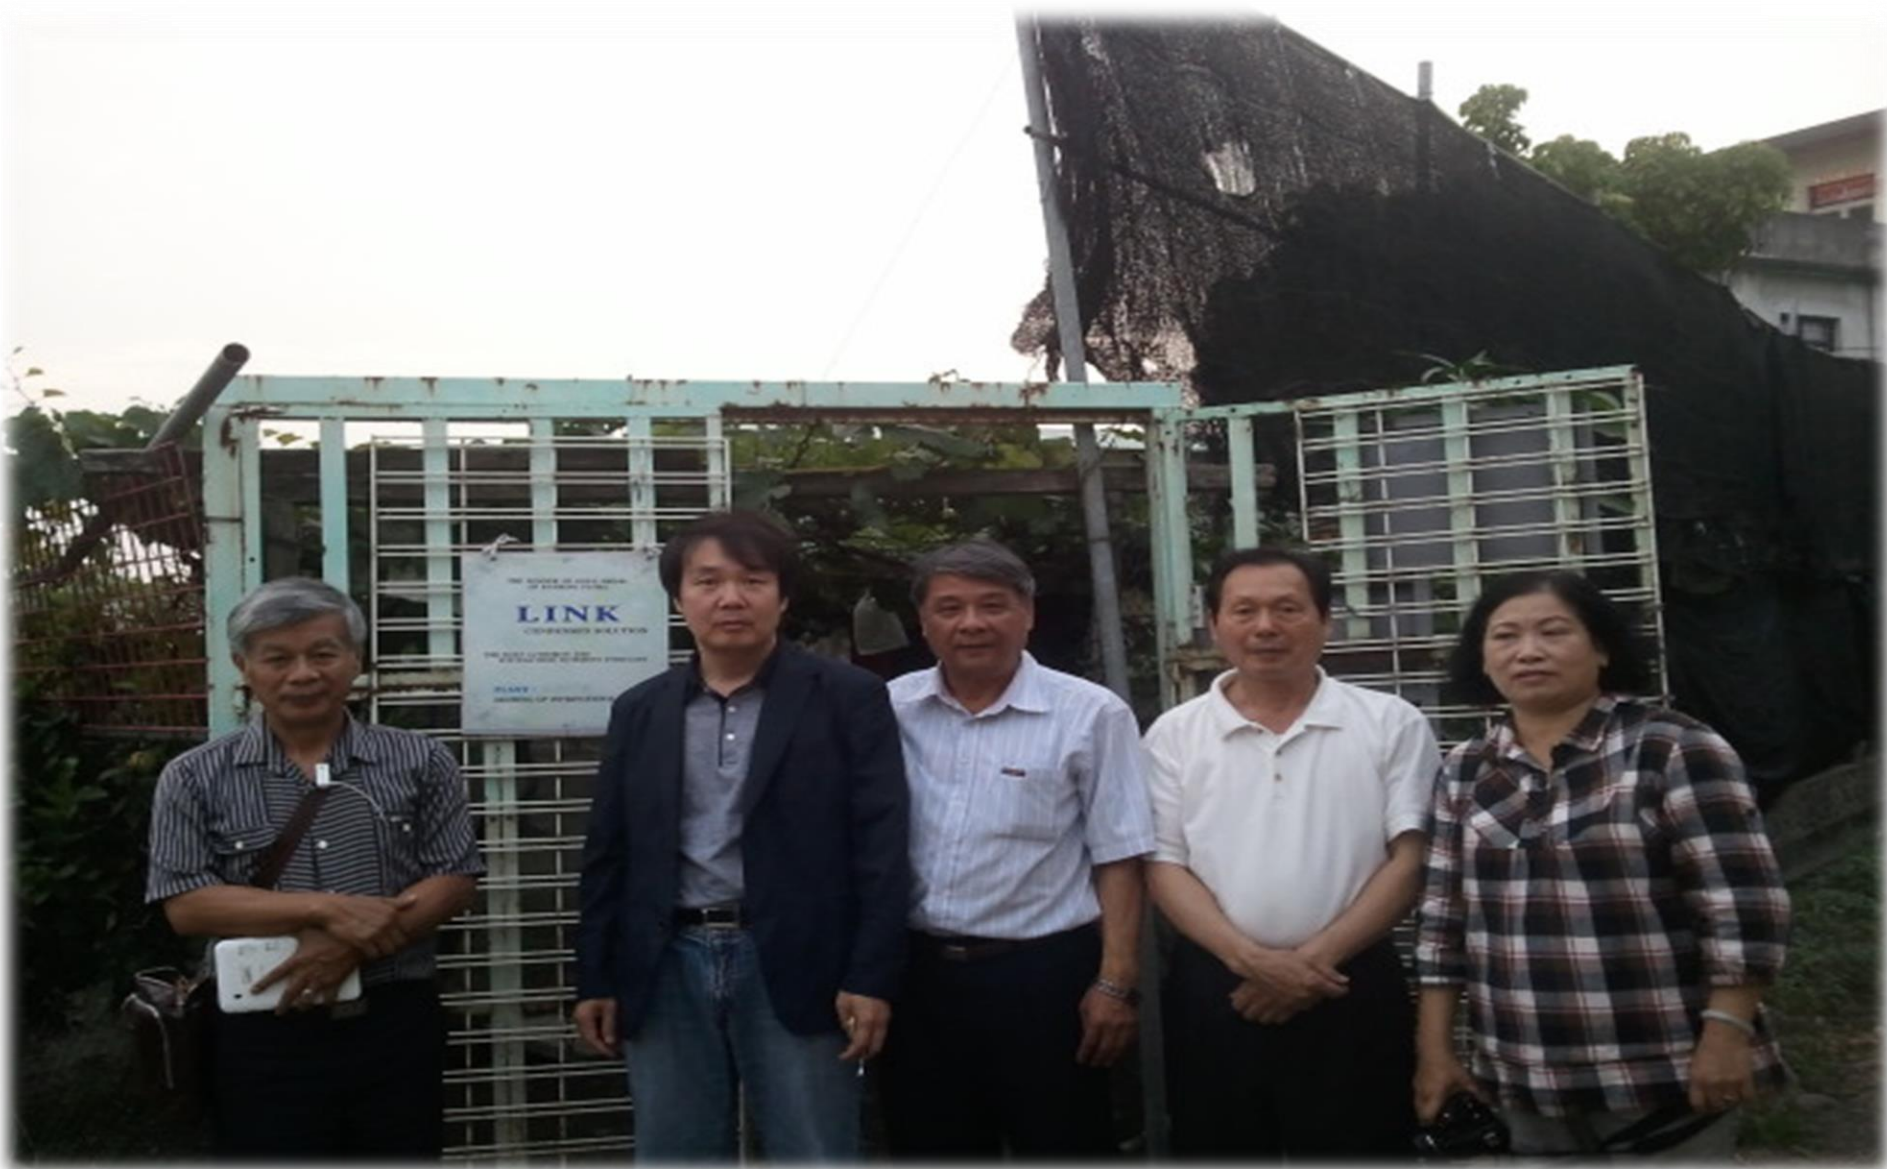

What happens next?

The demonstration vineyard in Changhua Big Village, Taiwan. The return report situation of rainstorm flooding in this rainy season (The raining since 06/02/2017 to 06/22/2017 for 20 days). **Prevention is better than cure.** Owners in this year after the grape trees germination, diluted GPL-37 chain reaction organic fertilizer 1: 1500, to irrigate at the root for 800 liters dosage, around 0.1 ha. Now encounter flood and the vineyard were soaked in rain water for 20 days, grape still is not softened, not cracked. It's really useful.

Because the active ingredients of GPL-37 Chain Reaction Agent **can promote pulp hypertrophy and the growth of epidermal cells at the same time** so that it will not cause cracked-fruit or produce brown rot, dew disease, and so on. It's a crazy event.

Owner: Kang Vineyard

The demonstration vineyard in Changhua big village AFTER the flood 20 days.

Grapes very hard and tough, solid flesh plump.
